

Hi this is a test pdf for my rag beginners miniproject.

Ollama is a free, open-source platform that allows you to download and run Large Language Models (LLMs) directly on your own computer. Think of it like a "package manager" for AI: it handles all the heavy lifting, complex configurations, and hardware requirements, enabling you to run models like Llama 3, Mistral, and Gemma locally with just one command. [[1](#), [2](#), [3](#), [4](#), [5](#)]

Ollama is a groundbreaking platform that democratizes access to large language models (LLMs) by enabling users to run them locally on
